

Consumer & Collection Insights

Advanced skip tracing tool that offers expanded sourcing, flexible request options and a simple report structure

Locate an individual's name/aliases, Social Security Number, Date of birth, current address, previous address history, and associated phone numbers.

Available: Web Based Batch API

What does it do?

This service offers a second level search option to other MicroBilt skip trace and verification services such as Enhanced People Search to expand the number of sources queried to find additional information about an individual. Users can expand and narrow their search criteria by submitting the desired combination of name/alias, SSN and/or address to receive back all records that match the submitted criteria and linked individuals. Results are delivered in a list format that can be easily scanned and analyzed to quickly identify all relevant and useful information from the matched record set.

Data returned includes:

- Social Security Number
- Date of birth
- Name and aliases
- Current and previous addresses
- Associated phone numbers
- First and last seen dates

What is it used for?

Assists collections and recovery users with locating addresses and phones on hard-to-find skips.
