

Business Credentialing & Compliance

## Confirm a company's information before you do business

A convenient, fast tool for verifying a company's information before you begin a new client or vendor relationship.

Available:  Web Based  Batch  API

### What does it do?

Returns business information including:

- Business name
- Address
- Phone number
- FEIN

### What is it used for?

Used for business verification and credentialing as part of business loan underwriting and business application verification processes. Business Search may also be helpful in deriving business contact information in support of business collections and recovery.
